

DISCHARGE HANDOFF

Patient: Ada Whitcomb DOB: 1975-01-24 Age: 51 years

Record: DCH862941 Discharged: 30 September 2026

Responsible clinician: Dr. Nolan Hartwell

Admitted overnight with vomiting and reduced oral intake after several family members had a similar short illness. No blood in the vomit or stool. Mild dehydration on arrival - oral fluids tolerated after observation - abdominal examination remained soft. No cause beyond a possible self-limited infection was confirmed.

Ada Whitcomb normally takes amlodipine 5 mg daily. This was listed on the admission history; there is no new long-term medicine on the discharge list. A single antiemetic dose was given during observation. She manages medicines herself and lives with her adult sister. Please reconcile the home list at the planned primary-care review. The patient reported intermittent heartburn predating this illness; it was not investigated during this stay.
